

## User Documentation

### User Stories

Name: Destiny  
Age: 21  
Occupation: College Student (Senior)

Being a senior in college means I have to complete my assignments, search for employment after graduation, and maintain a social balance. I want the ability to categorize and prioritize my tasks, and know when my tasks are completed, so I can accomplish all of my tasks in a timely manner.

Name: Tiffany  
Age: 41  
Occupation: Software Developer

I am a full-time employee at a fast paced company, mother, and wife. Everyday I strive to fulfill my responsibilities. Because of this, I want to develop a to-do list web application that allows end users like Destiny to effectively organize and manage tasks, to feel more accomplished.

Name: Matthew  
Age: 34  
Occupation: UI/UX Designer

Since I have recently transitioned to a new company and I am a father to a new-born baby, I do not have much free time dedicated to learning intricate forms of technology to further advance myself. Understanding Destiny's needs, I want to design an easily navigated and aesthetically pleasing application, so that Destiny, and others, have a desire to utilize this particular web application.

### Stakeholders

Stakeholders in this project would be businesses that are split into teams that have specific tasks that need to be completed. For example, businesses that want to maximize their productivity would have to organize tasks by team and by individual. Additionally, this web application can be used by individuals who want to organize their day-to-day tasks, including leisurely tasks and work related tasks.
